DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

I. Regarding the active protein:

I-A. G-CSF

I-B. PTH

I-C. EPO

I-D. another **specific** active protein.

II. Regarding the amino acid in the composition:

II-A. methionine

II-B. lysine

II-C. histidine

II-D. arginine

II-E. aspartic acid

II-F. glutamic acid

II-G. threonine

II-H. asparagine

II-I. phenylalanine

II-J. tryptophan

II-K. leucine

II-L. isoleucine

II-M. valine

II-N. alanine

II-O. proline

II-P. glycine

II-Q. serine

II-R. glutamine

II-S. tyrosine

II-T. a **specific** combination of one or more of the above.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 1, 22, 28 are exemplary.

Art Unit: 1646

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Each active protein constitutes an independent contribution to the art. Since the PCT Rules define a special technical feature as one which makes a contribution to the art, each active protein corresponds to a different special technical feature and a different group. Similarly, each amino acid additive to the compositions and each specific combination thereof constitutes an independent contribution to the art. Since the PCT Rules define a special technical feature as one which makes a contribution to the art, each added amino acid (or specific combination thereof) corresponds to a different special technical feature and a different group.
